

RTM.

Three apps. One local-only loop.

THE PROMISE

Mix. Master. Ship.

One toolkit for the three things you've been stitching together.

THE PROBLEM

Audio QC still lives in four apps.

A meter plug-in for the numbers. A second DAW window for the A/B. A browser tab with the platform target LUFS. The artist on FaceTime asking "is it bigger?" RTM collapses all of that into one screen.

THE OTHER PROBLEM

Your ears lie after hour eight.

*Loudness wars trained an entire generation to mistake louder for better.
By the end of a session, even when you know that, your tired ears don't.*

THE ANSWER

Numbers, not vibes.

Drop a file. See the verdict. Ship the record.

THE DIFFERENTIATOR

Hear it through Spotify before you ship.

30 seconds of your master through Apple's actual AAC encoder, after Spotify's actual normalization, with the 4× true-peak limiter modeled on Apple's. The truth, before you upload.

THE RECEIPT

Fingerprint your mastering pass.

An 8-character hash of the per-band tonal move. Same hash twice = identical pass. Catches the 'remaster' that wasn't actually re-mastered.

THE VERDICT

AI in the vocals, or the whole mix?

Demucs splits vocals · drums · bass · other. Each stem gets its own verdict. Cloned vocals over real instruments score very differently from a fully synthetic track.

THE PRIVACY

Your unreleased mixes never leave this machine.

*Local-only by architecture. No telemetry. No phone-home. No analytics.
Your masters don't enter someone else's training corpus.*

THE ARCHITECTURE

Three apps. By design.

RTM Send is a 1 MB plugin on your master bus. RTMcompare is the analyser. RTMprofile turns your back catalogue into a target reference. They talk to each other through one local handoff folder.

THE ROADMAP

What's next.

Pro Tools AAX. ARA2 region capture. Multi-stem masking. Atmos object analysis. EV-signed Windows installer. All on the path.

THE ASK

Talk to us.

Press · review copies. Mastering engineers · beta seats. Label QC teams · lab-pack pricing. Investors · we're a small ops, real users, shipping product. hello@rtmcompare.com.

ONE LAST THING

The math doesn't habituate.

Your hearing changes hour to hour. Your reference monitors lie when the room is cold. Your ears adapt to a master in 90 seconds. The math doesn't get tired. The math doesn't care what time it is on a Friday. That's what RTMcompare is.
